

ABOUT: Ecological detergent for melting and averting ice and snow on road and covered surfaces, airports.

Dear Mr. and Mrs.,

Our company Emmonya Biotech Ltd. has developed, produces and offers You for using **ROX bio-melt** liquid for melting, removing and averting ice and snow formation during winter season. The detergent could be used preventively, before eventual snowfall and ice formation or after snowfall and ice formation. It doesn't contain salt and it is harmless to the people, the environment and the water areas, and works under temperatures up to -50°C. The consumption is a kilogram (1kg.) for an area between 10m² and 100m² depending on the thickness of the snow and the ice and on the type of the surface (asphalt, grass, metal, concrete, etc.)

Our detergent **ROX bio-melt** is bio-decomposable, it preserves the environment and it is harmless to the metal, the rubber packing and the paint of the vehicles, the asphalt road surface, the concrete and other covers, as well as the lye (for example).

The detergent could be used for cleaning of bridges, streets, highways, airports, schoolyards and hospitals, roofs, pavement areas at inhabited places and around residential buildings, parks, military ranges and many other places. Its usage doesn't require additional buying and equipment with special means of transport, cleaning engineering; it saves a lot of resources and the most important – it preserves the environment. Buying **ROX bio-melt** means that You take part in the global program for saving the environment for the future generations (stable development), You keep Your promises and ensure comfort for Your fellow-citizens.

We are waiting for your questions and comments on telephone: 0887 507917

Respectfully Yours: Emil Spasov, manager
